SUMMARY

Full-Stack Developer and AI Engineer with 2+ years at Accenture building production-grade cloud infrastructure automation and enterprise applications across multi-cloud environments. Combines strong software engineering fundamentals with deep, hands-on machine learning expertise — from training and fine-tuning large language models to designing retrieval-augmented and agentic AI systems that solve real operational problems. Owns projects end-to-end, from architecture and design through deployment, monitoring, and operations, consistently turning complex requirements into reliable, scalable systems. Proven track record of shipping work that reduces operational toil, improves platform reliability, and delivers measurable business impact. AWS Certified Cloud Practitioner; Google Cloud Associate Cloud Engineer.

EXPERIENCE

Packaged App Development Analyst, Accenture, India

June 2026 – Present

- Architect and deploy infrastructure automation platforms and ServiceNow workflows across 10+ enterprise client environments, standardizing deployment procedures and improving operational efficiency; lead end-to-end technical delivery of automation modules that reduce incident response time by ~40% and streamline change management processes across concurrent client engagements.
- Design and implement multi-cloud automation solutions using Terraform, Ansible, and Python across AWS, Azure, and GCP; build IaC pipelines for multi-region infrastructure provisioning, cutting manual cloud operations by 70%+ and accelerating DevOps pipeline execution by 35% through consistent, version-controlled, reproducible deployments.
- Build AI-driven monitoring and observability solutions using Azure OpenAI across production deployments — instrument systems for anomaly detection, automated root cause analysis, and proactive alerting; engineer observability pipelines that reduced mean time to resolution (MTTR) by 50%+ across monitored production environments.
- Orchestrate CI/CD pipelines (GitHub Actions) for 3+ active client projects; collaborate cross-functionally with product managers, R&D teams, and platform engineers to define test strategies, automate regression testing, and maintain 99.9%+ release reliability across cloud-native, containerized deployments.

Packaged App Development Associate, Accenture, India

August 2024 – May 2026

- Developed full-stack internal applications with Python, Django, ReactJS, and PostgreSQL; built 8+ RESTful APIs and microservices consumed by 4 operational dashboards powering cloud automation analytics; integrated Azure OpenAI APIs to automate repetitive cloud operations, saving 15+ engineering hours per sprint.
- Containerized 6+ services with Docker and deployed on Kubernetes (Azure): configured liveness/readiness probes, horizontal autoscaling, and rolling deployments; maintained CI/CD pipelines (GitHub Actions) with automated tests driving code coverage and quality gates; reduced average deployment cycle time from hours to under 20 minutes.
- Scripted infrastructure automation in Python and Bash; designed AI-driven telemetry for intelligent, predictive observability across production systems; authored and maintained deployment SOPs, operational runbooks, and architectural documentation used across 3+ cross-functional teams, cutting onboarding time for new engineers by 60%.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Bash, Go (familiar)

AI / ML: PyTorch, HuggingFace Transformers, LLM Training & Fine-Tuning (CPT, SFT, DPO, GRPO), LoRA / PEFT, LangChain, RAG pipelines, Agentic AI, Multi-Agent Systems, Vector Embeddings, Prompt Engineering

Frontend: ReactJS, Next.js, Tailwind CSS, Redux, Vite, HTML/CSS

Backend: Django, FastAPI, Express.js, Node.js, Redis, Celery, Prisma, REST APIs, Microservices, WebSockets

Databases: PostgreSQL, MongoDB, MySQL, Supabase VectorDB, SQLite

Cloud & Infrastructure: AWS, Azure, GCP, Docker, Kubernetes, Helm, Terraform, Ansible, ServiceNow, multi-cloud architectures, CDK

DevOps & CI/CD: GitHub Actions, GitOps (Flux / Argo CD), CI/CD pipelines, IaC, release management, Cloudflare Workers

Observability & Systems: AI-driven monitoring, anomaly detection, root cause analysis, performance metrics, distributed systems, Linux/Unix, microservices architecture

FULL-STACK & INFRASTRUCTURE PROJECTS

AutoSage: AI-Driven Infrastructure Automation Platform

2025–2026

Django, ReactJS, LangChain, RAG, Redis, Celery, GCP, Docker | [Demo](#) | [GitHub](#)

- Shipped a production full-stack AI platform where an LLM copilot turns plain-English intent into safe, auditable infrastructure actions; Django + Celery + Redis distributed backend runs concurrent provisioning, deployment, and health-check jobs with retries and failure isolation; Supabase VectorDB and RAG pipelines ground copilot responses in user-specific context; containerized on GCP with full request logging and audit trails.
- Engineered a multi-agent agentic AI layer (Azure OpenAI) that orchestrates long-running jobs across hosts, automates repetitive ops (deploys, backups, health checks), and streams real-time logs to the React dashboard; AI-driven observability instruments every operation for anomaly detection, predictive alerting, and automated root cause analysis — shifting fleet management from reactive to predictive. *Deep-dive: “Introducing AutoSage” (Sept 2026).*

SwiftPay: Real-Time P2P Payment Platform with Microservices Infra

2024–2025

Next.js, Express.js, PostgreSQL, Prisma, Docker, Kubernetes | [Demo](#) | [GitHub](#)

- Built a real-time P2P payment app (Next.js, Express.js, PostgreSQL, Prisma) — webhook-driven transaction processing with instant bank balance updates, multi-account management, and a responsive analytics dashboard; implemented secure session handling, input validation, and atomic transactions to guarantee financial data integrity under concurrent load.
- Designed a separate containerized microservices infrastructure for scalable, fault-tolerant deployment: Kubernetes with liveness/readiness probes, replica-based failover, horizontal autoscaling, and zero-downtime rolling deployments; CI/CD (GitHub Actions) drives automated tests and reproducible releases with deployment metrics tracked end-to-end.

AI & MACHINE LEARNING PROJECTS

MiniGPT-v3: LLM Post-Training & Alignment Pipeline

2026

PyTorch, SmolLM-135M, LoRA, CPT, SFT, DPO, GRPO | [Demo](#) | [GitHub](#)

- Fine-tuned SmolLM-135M through a complete post-training pipeline: Continued Pre-Training (WikiText), Supervised Fine-Tuning (Alpaca), Direct Preference Optimization (DPO, Orca pairs), and Reinforcement Learning from Verifiable Rewards (RLVR/GRPO) for arithmetic reasoning — each stage implemented as a composable, stackable LoRA adapter for modular fine-tuning.
- Deployed the aligned model on Streamlit with an interactive demo; quantized adapter weights for efficient CPU inference; documented loss curves, reward progression, and stage-by-stage trade-offs — end-to-end LLM post-training depth (the pipeline behind ChatGPT-style alignment) directly applicable to production AI model development.

MiniGPT (v1 → v2): GPT-Style Transformer from Scratch

2026

PyTorch, HuggingFace, Custom BPE Tokenizer, Gradio | [Demo](#) | [GitHub](#)

- Built decoder-only GPT-style autoregressive Transformers from scratch in PyTorch — from a character-level Shakespeare model (v1) to a 6.8M-parameter modern architecture (v2) with RMSNorm, Grouped-Query Attention (GQA), SwiGLU, and Rotary Position Embeddings (RoPE); hand-wrote a byte-pair encoding (BPE) tokenizer with no libraries, mastering the full text-to-token-to-embedding pipeline.
- Trained v2 on a TinyStories subset in a free Colab notebook; observed that models become *coherent* well before *factually correct* — a core insight informing RLHF and preference-optimization strategy; deployed on Render and HuggingFace Spaces with a Gradio demo. *Build log: “Coherent Isn’t the Same as Correct” (Aug 2026).*

CERTIFICATIONS

AWS Certified Cloud Practitioner

Amazon Web Services (Dec 2024 – Dec 2027)

Google Cloud Associate Cloud Engineer

Google Cloud Platform (Jan 2026 – Jan 2029)

EDUCATION

Ravenshaw University

Cuttack, Odisha, India

B.Sc. in Information Technology & Management | **Grade: 87.13%**

2021 – 2024

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Management Systems, Object-Oriented Design, Web Technologies, Cloud Computing, Software Engineering
